PITCH DECK

ForgTin®

reexperience silence.

pansatori GmbH
Laabstraße 96
A-5280 Braunau, Austria

15 %

of the world's population suffer from

TINNITUS.

TINNITUS

„... is a sensation of noise (such as a ringing or roaring) that usually is of the subjective form which can only be heard by the one affected“

15 %

of the world's population
is affected by tinnitus

150 million

tinnitus sufferers in
Europe and USA (today)

300 million

tinnitus sufferers
estimated by 2050

SOMATIC TINNITUS

“Somatic Tinnitus is a type of tinnitus that is influenced or triggered by physical movement or tension, especially in the jaw and or neck area.”

80% of all tinnitus sufferers are affected by a somatic tinnitus.

No cure for somatic tinnitus until now.

Currently there are only players with approaches like noisers, electromagnetic stimulation & software tools for cognitive behavior therapy on the market.

Nothing that can actually cure tinnitus.

OUR SOLUTION

The ForgTin®

ForgTin®, is a non-invasive, CE-certified, class 1 medical device (ear clamp) that helps somatic tinnitus sufferers to significantly improve or heal their tinnitus by putting gentle pressure on 3 essential pressure points around the ear. Just by mechanical work - no electronic or magnetism inside.

➤ **Musculus Auricularis Superior**

Through stimulating this point ForgTin® is able to reach the jaw area. Tension, injuries or problems in the jaw area are one of the main reasons for somatic tinnitus.

➤ **Musculus Auricularis Posterior**

Through stimulating this point ForgTin® is able to reach the neck area. Tension, injuries or problems in the neck area are one of the main reasons for somatic tinnitus.

➤ **Parasympathetic Impulse Area**

Stimulating this area helps to calm the nervous system. Tinnitus is often caused by stress and stress-related problems.

➤ **Endings of the Vagus Nerve**

Stimulating this area helps with the treatment of cardiovascular diseases, improves neurological disorders, reduces depression symptoms, chronic pain, etc.

Brand new. The ForgTin® Pro App.

With the purchase of the ForgTin® comes the ForgTin® Pro App.

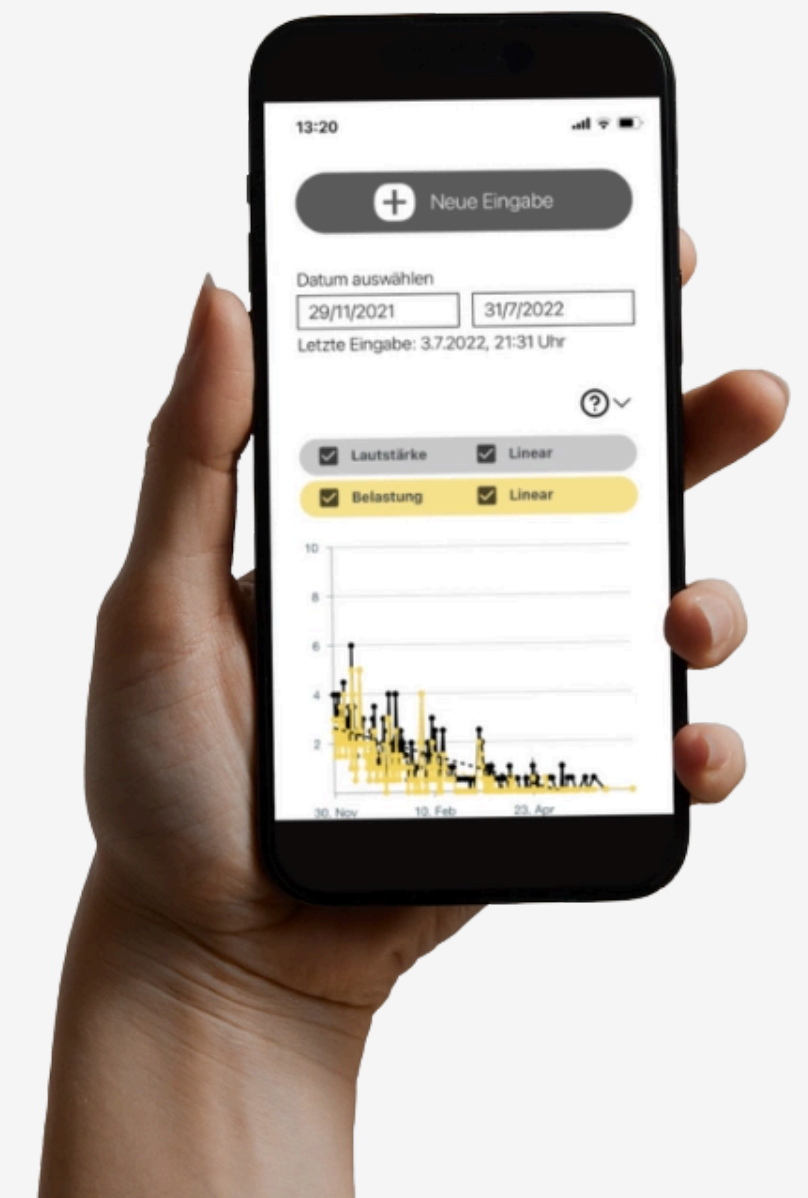

This app combines therapeutic audio tools, guided exercises, and educational content to support long-term relief from somatic tinnitus.

It enables users to:

- Integrate ForgTin® into daily routines
- Access calming sounds for masking and sleep
- Learn stress reduction techniques
- Track symptoms and progress with a built-in Tinnitus Diary

The ForgTin® Pro App turns the device into a complete treatment experience. Anytime and anywhere.

Available on the Apple App Store and Google Play Store.

Study results

Schlee et. al. (2021).

39% of users report a significant (>50%) decrease of their tinnitus volume after **6 weeks**.

60% of users report a significant (>50%) decrease of their tinnitus volume after **12 weeks**.

further positive effects: reduction of tension in neck and jaw area, improved sleep quality, reduction of stress, improved well-being, ...

Second study in peer review: New study by Prof. Pryss (Uni Würzburg), n = 440 – publishing date Q2 2026

Mentioned in clinical study from China stating that accupressure around the ear leads to flowing Qi: [find here](#)

Study spoiler

New study by Prof. Pryss (Uni Würzburg) will be published 2026.

With 440 participants & according to Dr. Schlee: results are the same as in the last study, if not even better.

Product Overview

➤ Material

ForgTin® is made out of stainless steel and soft touch silicone.

Weight of 7 grams per clamp.

➤ Made in Europe

All components of the ForgTin®, as well as the packaging, are being produced in Austria and Germany.

The ForgTin® is manufactured by Protolabs Germany.

CE-certified medical device class 1

2 patents in Austria

1 european patent

1 patent in the US

several patents in pending status

Market

Tinnitus affects 1 in 7 people worldwide – and for 80%, the source is somatic: rooted in physical tension. The market is massive and will double until 2050. The need is urgent. ForgTin® is the answer.

US-American Market

40 million with somatic tinnitus

Over 50 million Americans suffer from tinnitus. Roughly 40 million Americans struggle with a somatic tinnitus. Over 8 million of those have a severe somatic tinnitus.

European Market

90 million with somatic tinnitus

Over 112 million Europeans suffer from tinnitus. 90 million of those struggle with a somatic tinnitus. 20% of those sufferers have a severe somatic tinnitus. That are 18 million europeans.

Asia - Japan

14 million with somatic tinnitus

Over 18 million Japanese suffer from tinnitus. About 14 million suffer from a somatic tinnitus. Around 3 million have a severe somatic tinnitus.

Business Model

insights

Customer segment: Tinnitus patients with somatic and or stress-related tinnitus, hearing centers, hearing and ENT clinics

Direct sales: Mostly made directly via the online shop - currently over 3000 self-paying customers (B2C)

Indirect sales: Via sales partners - enable our international rollout
Several partnerships (Benelux, South Africa, Australia, ...) already made - more in negotiation

Reaching the audience through: online Social Media Marketing, partnerships, newspapers, ENT specialists, ...

status and timeline

- Market entry: November 2020
ForgTin® available as a serial product.
- Several awards won (Landesinnovationspreis OÖ, Edison Erfinderpreis, etc.) & further product developments.
- Now: Over 3000 pairs of ForgTin® clamps sold – mainly DACH region.
- Partnerships made with several distributors and hearing specialized companies. [Find them here.](#)
Summer 2025 launch of the ForgTin® Pro App.
- Future: further R&D and product development for tinnitus devices and beyond.
- **Our goal: Bringing lasting relief to millions living with tinnitus – with ForgTin®.**

OUR VISION

Born from personal struggle, built for global impact.

Our founder, Klaus Grübl, suffered from severe tinnitus for 19 years – until he created ForgTin®.

Now, tinnitus-free for over six years, his mission is clear:

To bring relief and resilience to millions worldwide facing invisible, chronic suffering.

Backed by 4 granted patents (EU, USA, AT) and protected trademarks across major global markets, we are building a new class of non-invasive medtech devices – combining ancient principles, modern science and cutting-edge design.

What comes next?

Our technology, based on a globally unique form of touch-based ear stimulation, is already expanding beyond tinnitus into other chronic conditions:

- ForgTin® night – a personalized, 3D-printed silicone clamp for stress relief, tinnitus and sleep
- Harmonizer – stimulating the vagus nerve & life energy (Qi) for emotional balance and recovery
- Stress Relief Clamp – a unisex wearable using gentle magnetic stimulation for daily relaxation
- ...and more to come

Together, we scale this vision.

We are now seeking the right strategic partner – someone who sees the chance to build a company that helps millions – and defines an entirely new space of medtech.

We are looking for you.
